

1 7/8" LEVER COUPLING WITH SECURALOK™

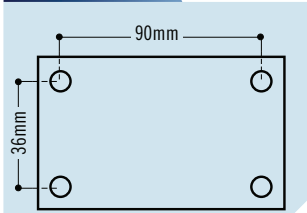

TE4C804

NEW PRODUCT

2500kg capacity

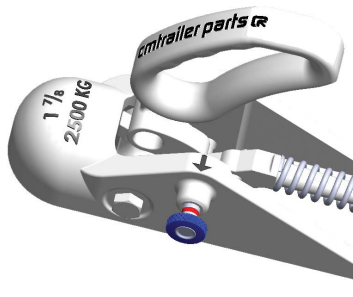

When towing a trailer, the trailer coupling needs to attach securely, every time. CM has conducted extensive R&D to improve safety and functionality, and modernise the ever-popular lever coupling. This new product sets a new benchmark.

BOLT PATTERN

HEAVIER 2500kg LOAD RATING.

Designed with heavier and more rugged applications in mind.

SAFETY.

We have completely redesigned the lock mechanism using CM's SecuraLok™ technology. The innovative, stainless steel, patented safety/lock pin mechanism automatically engages whenever the coupling lever is released. If you can see the red ring, this alerts the operator the SecuraLok™ pin is not engaged. CM's new design eliminates the risk of forgetting to install and engage the lock pin: many trailer coupling disconnections are caused by this issue.

BOLTS TABBED.

The mounting bolt holes are all tabbed for easier and faster installation time.

SECURITY LOCK.

CM has designed and patented a smart new separate security lock hole. Now you have the choice to fit or not fit a security lock at any time.
